

Michael (Zijing) Wu, Finance VP Statement of Interest

I have been a member of the Finance Committee for a year, and I really enjoyed working for Finance. Throughout the year, we have met with many student groups, and I have seen a lot of potential for our student groups to develop diversity on campus, as well as reaching out to the community around us. I believe that I can keep promoting this tendency through supporting more those student events financially.

For 2016-2017 student government, I would like to see more development for CCSGA within itself, as well as working with other student groups on campus. Within CCSGA, I would like to work with the full council to develop more diverse discussion and working environment. With other student groups, I would like work with full council members to support and promote a better study and living environment based on our Block Plan.

After working as a member of the Finance Committee for 2015-2016, I have learned the procedures of meeting different student groups and planning out the CCSGA budget. Besides my experiences as a member of the Finance Committee, I am also a member of the President's Council, a Co-chair of CSA, and an ISO leader. My experiences have provided me a better vision of what CC is concerning at the moment and aiming for in the future, among student body and administrators. With these experiences, I would be able to manage the financial budget that benefits different student groups.

Promoting diversity, improving CC and community relationship, and supporting all students with a less stressful environment is my greatest concerns on campus right now. I want to enhance all of them through working as the Finance VP. Many student organizations have already started many events that focus on diversity and community relation this year, and I would propose to support those groups and events more next year. In order to promote a less stressful environment for CC students, I would propose for CCSGA to work as a group to provide supporting events or programs throughout blocks.
